Doctor–Patient Appointment System

1. Login System

The system provides a login system for different users.

Admin Login

Admin logs in using Admin ID and Admin Name.

After successful login, the admin can manage doctor information and appointment details.

Doctor Information

Each doctor is associated with an Admin ID/Doctor ID.

Doctor information includes:

Doctor Name

Specialization

Available Timing

Available Days

Consultation Fees

Patient Login

The patient is identified using a Patient ID and Patient Name.

The patient can view available doctor information and select a doctor for an appointment.

2. Admin Module

The Admin is responsible for adding and managing doctor information.

The admin can insert the following information into the database:

FieldDescription

Doctor IDUnique ID of the doctor

Doctor NameName of the doctor

SpecializationDoctor's medical specialization

TimingAvailable appointment time

DaysAvailable days

FeesDoctor's consultation fee

Example

The admin adds:

Doctor ID: D001

Doctor Name: Dr. Ahmed

Specialization: Cardiologist

Timing: 5:00 PM – 8:00 PM

Days: Monday, Wednesday, Friday

Fees: Rs. 2000

This information is stored in the database.

3. Patient Module

The patient can select and view available doctors.

The patient provides:

Patient ID

Patient Name

Age

Doctor Information

The system displays the available doctor information so that the patient can select a suitable doctor.

Patient Data

FieldDescription

Patient IDUnique ID of the patient

Patient NameName of the patient

AgeAge of the patient

Doctor IDSelected doctor's ID

Doctor NameSelected doctor's name

SpecializationDoctor's specialization

TimingAppointment timing

FeesConsultation fee

The patient's information is inserted into the database after the appointment is selected.

4. Database Operations

The system uses basic database operations:

INSERT – Admin adds doctor information and patient books an appointment.

SELECT – The system displays doctor and patient information.

UPDATE – Admin can update doctor timing, fees, or other information.

DELETE – Admin can remove doctor information when required.

5. Basic System Flow

Admin Login → Add Doctor Information → Store in Database → Patient Login → Select Doctor → Enter Patient Information → Insert Appointment → Display Appointment/Doctor Information

The system therefore provides a simple connection between the Admin, Doctor, and Patient, allowing doctor information to be managed and patients to select available doctors for appointments.
